

Datahaven™

Paperless Redefined™

Embedded, High Performance Scanning, OCR, and Workflow for Microsoft Dynamics 365 Business Central and Outlook

Datahaven for Dynamics 365 provides organizations with a robust, cost-effective archive storage and retrieval solution that automates naming and filing protocols and displays security-controlled, context-sensitive folder and list views of transactional and non-transactional documents, email, and other electronic files related to any Microsoft Dynamics record in any Microsoft Dynamics module. With search, navigation, and workflow functionality embedded directly within the familiar interfaces of Microsoft Dynamics and Microsoft Outlook, Datahaven for Dynamics also offers enterprise-class features for organizations with more complexity and higher volume, including high-speed batch scanning, document-centric workflow, high-volume OCR data extraction, and a granular security model and audit trail.

Datahaven for Dynamics 365— shown here embedded within Microsoft Outlook— provides Dynamics and non-Dynamics users with instant access to, and the ability to route and approve any document, email or other electronic files related to a Dynamics record.

Datahaven Differentiation

Datahaven is a truly unique document management platform in the Microsoft Dynamics 365 ecosystem. By embedding a complete document automation solution throughout Microsoft Dynamics and Outlook, Datahaven offers a powerful combination of intuitive interfaces and advanced scanning, OCR, and workflow functionality to deliver complete visibility, greater efficiency, and better compliance.

Virtual Folders

Complete Automation

Patented Virtual Folder Technology

Don't limit yourself to Dynamics file attachments, SharePoint, and old fashioned folder structures. Experience the unique power and flexibility of our patented virtual folder technology embedded in the native Dynamics 365 interface. Datahaven virtual folders display virtual folder structures with every document related to a Dynamics transaction (even those added to other related Dynamics transactions) without requiring users to spend time navigating to other Dynamics records or searching for documents that may have been added to a related Dynamics record. Datahaven's virtual folder technology dramatically enhances document and transactional visibility across an organization.
